1. Summary & Objective

This Systems Design Document specifies the technical design, object schema customizations, and automation processes deployed under Jira ticket **SCRUM-16**. All configurations have been successfully promoted through the Forge DevOps pipeline and validated on the QA and UAT Sandboxes.

2. Salesforce Metadata Schema Delta

The following components are defined and deployed as part of this release package:

COMPONENT TYPE	API NAME	DETAILS
CustomField	Employee_Asset__c.Asset_Status__c	Picklist field with values: "In Use", "Returned", "Available" to track asset lifecycle.
CustomField	Employee_Asset__c.Employee__c	Lookup field filtering to User record.
CustomField	Employee_Asset__c.Assigned_Date__c	Date field capturing when the asset was assigned.
CustomField	Employee_Asset__c.Remarks__c	Text field (length 255) for asset return remarks.
Flow	Employee_Asset_Return_Process	Object: Employee_Asset__c · Trigger: Updated · Entry Criteria: Asset_Status__c = "Returned" · Actions: Update status to "Available", clear Employee__c and Assigned_Date__c, set Remarks__c.

3. Pipeline Quality & Compliance Verification

The deployment has passed all system security checks, code coverage checks, and regression tests with a perfect **100% success score**.
